

# **Concise Implementation of Linear Regression**

**Eng Teong Cheah** 

## 目录

Concise Implementation of Linear Regression

## Concise Implementation of Linear Regression

## **Generating Data Sets**

```
from mxnet import autograd, nd
num_inputs = 2
num_examples = 1000
true_w = [2, -3.4]
true b = 4.2
features = nd.random.normal(scale=1, shape=(num_examples, num_inputs))
labels = true_w[0] * features[:, 0] + true_w[1] * features[:, 1] +
tabelb += nd.random.normal(scale=0.01, shape=labels.shape)
```

## **Reading Data**

```
# Save to the d2l package.
def load_array(data_arrays, batch_size, is_train=True):
    """Construct a Gluon data loader"""
   dataset = gluon.data.ArrayDataset(*data_arrays)
    return gluon.data.DataLoader(dataset, batch_size, shuffle=is_train)
batch_size = 10
data_iter = load_array((features, labels), batch_size)
```

## **Reading Data**

```
for X, y in data_iter:
   print(X, y)
   break
```

```
[-1.130275 0.3379702]
[0.39320782 1.5395709]
[-0.06822178 0.72335476]
[-2.0644426 0.50765425]
[0.03313668 1.3074721]
[-0.52480155 0.3005414]
[ 0.4652423 -0.5965788 ]]
<NDArray 10x2 @cpu(0)>

7.1612334
<NDArray 10 @cpu(0)>
```

#### **Define the Model**

```
from mxnet.gluon import nn
net = nn.Sequential()
```

#### **Initialize Model Parameters**

```
from mxnet import init
net.initialize(init.Normal(sigma=0.01))
```

#### **Define the Loss Function**

```
from mxnet.gluon import loss as gloss
loss = gloss.L2Loss() # The squared loss is also known as the L2 norm loss
```

## **Define the Optimization Algorithm**

```
from mxnet import gluon
trainer = gluon.Trainer(net.collect_params(), 'sgd', {'learning_rate':
0.03})
```

### **Training**

```
num_epochs = 3
for epoch in range(1, num_epochs + 1):
    for X, y in data_iter:
        with autograd.record():
            l = loss(net(X), y)
        l.backward()
        trainer.step(batch_size)
    l = loss(net(features), labels)
    print('epoch %d, loss: %f' % (epoch, l.mean().asnumpy()))
```
